Executive Summary

The global economy demonstrated continued resilience in the first quarter of 2026, although momentum was tempered by the outbreak of conflict in the Middle East, which introduced new headwinds through higher commodity prices, firmer inflation expectations, and tighter financial conditions. Global growth is estimated at 3.4 percent in 2025 and is projected to slow to 3.1 percent in 2026, before recovering modestly to 3.2 percent in 2027. Global headline inflation is projected to rise from 4.1 percent in 2025 to 4.4 percent in 2026, driven primarily by higher energy and food prices associated with disruptions in the Strait of Hormuz.

Somalia's economy entered 2026 on a weaker footing than in previous years. Real GDP growth moderated from 4.0 percent in 2024 to an estimated 3.1 percent in 2025 and is projected to slow further to 2.6 percent in 2026. The first quarter of 2026 was characterised by an intensifying drought, a sharp external energy price shock, and continued retrenchment of foreign aid. Headline inflation is projected to increase to 5.9 percent in 2026, from 3.7 percent in 2025, as fuel prices more than doubled following the Middle East conflict, generating broad-based cost-push pressures across transport, food, and utilities. The Somali shilling depreciated by 1.2 percent during the quarter, with the average exchange rate reaching SOS 31,956 per US dollar. Private consumption, underpinned by remittance inflows, remained the principal driver of domestic demand.

Somalia's merchandise trade deficit widened further in 2026Q1. Total merchandise imports increased by 16 percent year-on-year to US\$2,478.74 million, driven by higher demand for construction materials, clothing and footwear, medical products, and oil and gas. Total exports increased by 20 percent to US\$345 million, supported by stronger livestock, animal skins, and fishery exports. Livestock remained the dominant export commodity, accounting for 75 percent of total merchandise exports at US\$258 million. Notwithstanding improved export performance, the trade deficit widened to US\$2,134 million from US\$1,844 million in 2025Q1, reflecting continued structural dependence on imported goods and a narrow export base.

Fiscal performance in the first quarter of 2026 reflected continued progress in domestic revenue mobilisation alongside weaker external grant inflows. Total government revenue and grants reached US\$154 million, representing 12 percent execution of the annual budget, while total expenditure amounted to US\$171 million, resulting in a financing gap of US\$17 million. Domestic revenue increased by 7 percent year-on-year to US\$101 million, driven by improvements in tax administration and compliance. External grants declined by 18 percent to US\$53 million, as bilateral disbursements fell to zero and multilateral inflows moderated. Capital expenditure remained low at US\$7 million, equivalent to 3 percent of the approved annual capital budget, reflecting persistent implementation constraints.

Somalia's financial sector continued to expand and strengthen in the first quarter of 2026, supported by regulatory reforms led by the CBS. Total banking sector assets increased to US\$2,352 million, representing quarterly growth of 2 percent and annual growth of 16 percent. The sector maintained sound prudential indicators, with capital adequacy and liquidity ratios comfortably exceeding regulatory minimums. Inward remittance transfers amounted to US\$1,588 million during the quarter. The national payment system processed 337,788 transactions with a combined value of US\$593 million, reflecting broader adoption of electronic payment infrastructure and continued deepening of financial intermediation.

Soo Koobid Guud

Dhaqaalaha Adduunka

Dhaqaalaha caalamka ayaa muujiyey adkaysi rubucii koowaad ee 2026, inkasta oo koboca dhaqaalaha uu yaraaday kadib markii uu qarxay dagaalka Bariga Dhexe, kaas oo sababay caqabado cusub oo ka dhashay kororka qiimaha badeecadaha muhiimka ah iyo filashada kor u kaca sicir-bararka. Koboca dhaqaalaha adduunka waxaa lagu qiyaasayaa inuu noqday 3.4 boqolkiiba sannadka 2025, waxaana la filayaa inuu hoos ugu dhaco 3.1 boqolkiiba sannadka 2026, waxaa sidoo kale la filayaa inuu soo kabto sanadka soo socda ee 2027, oo uu gaaro 3.2 boqolkiiba. Sicir-bararka guud ee caalamka ayaa la saadaalinayaa inuu kor u kaco uu gaaro 4.4 boqolkiiba halkii uu ka ahaa 4.1 boqolkiiba sanadkii hore ee 2025ka, taas oo inta badan ay sabab u yihiin kororka qiimaha shidaalka iyo cuntada ee ka dhashay carqaladaha ka jira marin-biyoodka Hormuz.

Dhaqaalaha Gudaha

Kobaca wax-soo-saarka gudaha (GDP) ayaa hoos uga dhacay 4.0 boqolkiiba sannadka 2024 una dhacay qiyaastii 3.1 boqolkiiba sannadka 2025, waxaana la filayaa inuu sii yaraado oo uu gaaro 2.6 boqolkiiba dhamaadka sannadka 2026. Hoos u dhaca korarka dhaqaalaha gudaha waxaa sabab u ahaa abaaraha sii xoogaysanaya, iyo sii yaraanshaha taageerada dhaqaale ee dibadda uga timaadda Soomaaliya.

Sicir-bararka guud ee Soomaaliya ayaa la filayaa inuu gaaro 5.9 boqolkiiba sannadka 2026, marka loo eego 3.7 boqolkiiba sannadka 2025, iyadoo sababta ugu weyn ay tahay qiimaha shidaalka oo in ka badan laba jibbaarmay kadib colaadda Bariga Dhexe. Kororkaasi wuxuu sababay cadaadis saameeyey gaadiidka, cuntada, iyo adeegyada muhiimka ah. Shilinka Soomaaliga ayaa rubucii koowaad qiimo-dhac ku yimid 1.2 boqolkiiba ah, iyadoo celceliska sarifka lacagtu gaaray 31,956 shilin Soomaali halkii doollar ee Maraykan ah.

Ganacsiga Dibadda

Wadarta badeecadaha la soo dejiyey waxay korortay 16 boqolkiiba marka loo eego isla muddadii sannadkii hore, iyadoo gaartay US\$2,478.74 milyan oo doolarka Maraykanka ah. Kororkan waxaa sababay baahida sii kordhaysa ee qalabka dhismaha, dharka iyo kabaha, dawooyinka, iyo shidaalka iyo gaaska.

Dhoofinta Soomaaliya waxay korortay 20 boqolkiiba, iyadoo gaartay US\$345 milyan, taas oo ay sababtay koboca dhoofinta xoolaha nool, hargaha iyo maqaarka, iyo kalluunka. Xoolaha nool ayaa weli ahaa badeecadda ugu badan ee la dhoofiyo, iyadoo ahayd 75 boqolkiiba wadarta dhoofinta badeecadaha, una dhiganta US\$258 milyan.

Miisaaniyadda Dowladda

Dakhliga guud ee dowladda ayaa gaaray US\$154 milyan, taas oo ka dhigan 12 boqolkiiba fulinta miisaaniyadda sannadlaha ah. Kharashaadka dowladda ayaa gaaray US\$171 milyan, taasoo dhalisay farqi maaliyadeed oo dhan US\$17 milyan.

Dakhliga gudaha ayaa kordhay 7 boqolkiiba marka loo eego sannadkii hore, isagoo gaaray US\$101 milyan, taas oo ay keeneen horumaro laga sameeyey maamulka canshuuraha iyo u hoggaansanaanta bixinta canshuuraha. Deeqaha dibadda ayaa hoos u dhacay 18 boqolkiiba, iyagoo gaaray US\$53 milyan.

Hay'adaha Maaliyadda

Hantida guud ee bangiyada ayaa gaartay US\$2,352 milyan, taas oo ka dhigan koboc 2 boqolkiiba ah marka loo eego rubucii hore iyo 16 boqolkiiba marka loo eego sannadkii hore isla rubacan oo kale. wadarta guud ee daymaha bankiyada ayaa iyadana kor u kacday waxayna gaartay US\$2,030 milyan rubucii koowaad ee 2026, marka loo eego US\$1,976 milyan rubucii hore iyo US\$1,710 milyan rubucii koowaad ee 2025.

Lacagaha xawaaladaha ee gudaha dalka soo galay waxay rubucan gaareen US\$1,588 milyan. Nidaamka lacag-bixinta qaranka ayaa fududeeyay 337,788 macaamil ganacsi oo wadarta qiimahoodu ahayd US\$593 milyan, taas oo muujinaysa in isticmaalka lacag-bixinta elektaroonigga ah uu sii fidayo.

1

World Economy

According to the IMF's April 2026 World Economic Outlook, global economy faces a major new challenge following the outbreak of war in the Middle East. Although recent economic growth has been supported by technology investment, easier financial conditions, and policy support, the conflict threatens these gains by increasing energy prices, inflation, and financial uncertainty. The IMF's reference forecast assumes the conflict will be limited and disruptions will ease by mid-2026. Under this assumption, global economic growth is projected to slow downward to 3.1 percent in 2026 (a downward

revision of 0.2 percentage points from the January 2026 forecast) and recover slightly to 3.2 percent in 2027, remaining below the historical average of 3.7 percent. Global inflation is expected to increase upward to 4.4 percent in 2026 before declining to 3.7 percent in 2027. Without the conflict, global growth would have been revised upward to 3.4 percent in 2026, showing that the war is the main reason for the lower growth forecast.

The report emphasizes that the effects of the war will not be evenly distributed. Emerging markets and developing economies, especially those that rely on imported energy are already facing economic weaknesses, and expected to suffer the most. If the conflict lasts longer or damages energy infrastructure, global growth could fall further to 2–2.5 percent, while inflation could rise above 5–6 percent, creating severe economic challenges worldwide.

Figure 1: Global Real GDP Growth (Percentage Change) 2025-2027

Source: IMF WEO April 2026

Growth in Advanced Economies (AEs) is estimated at about 1.9 percent in 2025 and is projected to ease to around 1.8 percent in 2026, before modestly declining to 1.7 percent in 2027. The outlook for advanced economies remains broadly unchanged from January 2026 WEO, as the direct impact of the Middle East shock is partly offset by the resilience of services activity, AI-driven investment, and gradually easier monetary conditions. On the other hand, in Emerging Markets and Developing Economies (EMDEs), growth is estimated at around 4.4 percent in 2025 and projected to moderate to about 3.9 percent in 2026, before recovering to 4.2 percent in 2027, mainly reflects the impact of higher energy and food prices, foreign exchange depreciation pressures, and the deterioration in external financing conditions for commodity-importing economies.

Growth in Sub-Saharan Africa is estimated at about 4.5 percent in 2025, the fastest pace in a decade, reflecting hard-won stabilization gains. Regional growth is, however, projected to ease to 4.3 percent in 2026, before recovering to 4.4 percent in 2027. The downgrade reflects the impact of higher oil, gas, and fertilizer prices, disrupted trade with Gulf partners, lower tourist arrivals, and weaker remittance prospects. Inflation pressures have re-emerged in the region, with median inflation projected to rise from 3.4 percent in 2025 to 5.0 percent in 2026.

According to the Organization for Economic Co-operation and Development, economic activities across its member countries in the first quarter of 2026 showed moderate momentum. Real GDP growth in the OECD area increased to about 0.4 percent in the 2026Q1, up from 0.2 percent in the fourth quarter of 2025, supported by a rebound in the United States and the United Kingdom. In the first quarter of 2026, GDP growth in major European economies showed mixed performance. The Euro Area recorded growth of around 0.1 percent, slightly below the 0.2 percent observed in 2025Q4, while growth in the European Union eased marginally to 0.2 percent compared with the previous quarter. Germany expanded by 0.3 percent, while France recorded no growth as private consumption, investment, and exports contracted. In the first quarter of 2026, GDP in the G7 economies registered a moderate expansion of 0.4 percent, up from 0.2 percent in the fourth quarter of 2025. Performance across the group was uneven: the United Kingdom (0.6 percent), the United States and Japan (0.5 percent each), Canada (0.4 percent), and Italy (0.2 percent). The acceleration in the United Kingdom mainly reflected stronger private and government consumption, while in the United States, a rebound in government consumption and exports, alongside higher investment, supported activity.

Source: G20 and OECD GDP Growth Quarterly Report 2026Q1

1.1 Global Trade

Global trade continued to expand in early 2026, although momentum has weakened relative to the strong gains recorded during 2025. According to the IMF's WEO, April 2026, world trade volume growth is estimated at about 5.1 percent in 2025 and is projected to slow sharply to 2.8 percent in 2026, before recovering to 3.8 percent in 2027. The 2026 slowdown reflects weaker global demand, persistent geopolitical tensions, rising trade costs, and supply disruptions linked to the conflict in the Middle East.

According to the UNCTAD Global Trade Update of April 2026, the value of global trade in goods and services reached approximately US\$35 trillion in 2025, an increase of about US\$2.5 trillion (7.5 percent) compared with 2024. Goods accounted for about US\$1.8 trillion of that increase (around 7 percent growth), while services contributed roughly US\$700 billion (around 8 percent growth). UNCTAD estimated that the positive trend continued in the first quarter of 2026, with goods and services expected to grow by 2.5 percent and 2 percent, respectively.

Figure 2: Global Trade Growth (Percentage Change) 2025-2027

Source: IMF WEO April 2026

According to the OECD International Trade Statistics of 2026Q1 report, G20 merchandise trade expanded strongly in the first quarter of 2026, with both exports and imports rising by 5.3 percent quarter-on-quarter compared with the fourth quarter of 2025, partly driven by trade of semiconductors and other high-technology products in East Asia. Estimates also indicate that G20 trade in services expanded modestly, with exports rising by 1.7 percent and imports by 1.5 percent, despite disruptions to trade related to the ongoing crisis in the Middle East.

1.2 Global Inflation

Global inflation pressures have re-intensified in early 2026, reversing part of the disinflation observed in recent years. The impact of higher energy prices, driven by the conflict in the Middle East and disruptions in the Strait of Hormuz, has been transmitted to broader commodity markets, raising inflation expectations and lifting headline inflation across most regions. According to the IMF's WEO, April 2026, global headline inflation is projected to rise from an estimated 4.1 percent in 2025 to 4.4 percent in 2026, before declining to 3.7 percent in 2027. This represents an upward revision of 0.6 percentage points for 2026 and 0.3 percentage points for 2027 compared to the January 2026 WEO, reflecting the impact of higher energy and food prices.

Figure 3: Global Inflation Rate (Percentage Change) 2025-2027

Source: IMF WEO April 2026

Inflation in AEs is projected to edge up from 2.5 percent in 2025 to about 2.8 percent in 2026, before easing to 2.2 percent in 2027. In the United States, above-target inflation has persisted, with core inflation for personal consumption expenditure remaining elevated, supported by a still-tight labor market and the gradual pass-through of higher trade barriers. Inflation in EMDEs is projected to remain elevated, rising from 5.2 percent in 2025 to about 5.5 percent in 2026, before declining to 4.6 percent in 2027. The slower pace of disinflation reflects the larger pass-through of energy and food prices, exchange rate depreciation pressures, and the impact of tighter external financing conditions in commodity-importing economies.

According to the FAO Food Price Index, the global FAO Food Price Index rose from 124.3 points in December 2025 to 128.5 points in March 2026, marking a 3.4 percent quarter-on-quarter increase. The rise in March was driven primarily by higher prices for cereals, meat, dairy products, vegetable oils, and sugar, reflecting both market fundamentals and the impact of higher energy prices linked to the escalating conflict in the Middle East. The FAO Vegetable Oil Price Index, in particular, reached its highest level since mid-2022, while sugar prices increased by 7.2 percent in March 2026.

1.3 Global Financial Stability

According to the IMF Global Financial Stability Report (April 2026), global financial stability risks increased in the first quarter of 2026 as markets adjusted to heightened geopolitical tensions in the Middle East. Since late February, global equity markets have weakened, while sovereign bond yields have risen amid higher energy prices and renewed concerns about inflation. The US dollar strengthened moderately, reflecting its traditional safe-haven role during periods of heightened uncertainty. Although financial markets have remained orderly, the IMF highlights that risks have become increasingly asymmetric, with the possibility of a sharper tightening in global financial conditions if geopolitical tensions persist.

In AEs, financial markets remained broadly resilient, though long-term bond yields edged higher in several jurisdictions, reflecting concerns over elevated public debt, persistent inflation pressures, and uncertainty about the pace of monetary easing. EMDEs have been disproportionately affected by the recent market repricing. Capital flows to emerging markets, largely intermediated by nonbank financial institutions, have shown heightened sensitivity to shifts in global risk sentiment, with commodity-importing economies and those with pre-existing vulnerabilities experiencing the largest impacts. Sovereign spreads have widened in several emerging markets, while local-currency bond markets came under pressure during periods of US dollar strength.

1.4 Implications for the Domestic Economy

Amid the renewed global energy shock, persistent geopolitical tensions, and tighter external financing conditions, Somalia's economy faces growing exposure to external risks transmitted through trade, remittances, aid, and commodity prices. The external sector remains heavily dependent on livestock exports and imported goods, while economic activities in key Gulf trading partners have come under pressure following the disruptions in the Strait of Hormuz. Growth among Somalia's key trading partners is moderating across both import sources and export destinations. According to the IMF April 2026 WEO, China's growth is projected to ease to 4.5 percent in 2026 and 4.2 percent in 2027, while India is expected to remain the fastest-growing major economy, expanding by about 6.4 percent in 2026 and 6.3 percent in 2027. Türkiye, another key import source for Somalia, is projected to expand by about 3.0 percent in 2026. On the export side, growth in the

United Arab Emirates, Oman, and Saudi Arabia has followed a downward trend, reflecting lower oil production and trade disruptions associated with the Middle East conflict. Saudi Arabia and the United Arab Emirates are projected to grow by about 3.1 percent in 2026, while Oman is projected to grow by 3.5 percent in 2026. Somalia's economic growth outlook for 2026 has weakened compared with earlier projections. IMF' GDP forecast has been revised downward to around 2.6 percent from 3.1 percent, due to the combined impact of higher global energy and food prices, persistent climate-related shocks, and continued declines in foreign aid. Despite these challenges, private consumption supported by continued remittance inflows is expected to remain a key driver of domestic demand and provide some support to economic activity. Inflation is expected to remain elevated, reflecting the pass-through of higher imported food and fuel prices.

Domestic Economy

Somalia's economy entered 2026 on a weaker footing than in previous years, as the convergence of declining foreign aid, persistent climate shocks, and a sudden external energy price shock tested the resilience that had characterized recent performance. Following real GDP growth of 4.0 percent in 2024, economic activity moderated to an estimated 3.1 percent in 2025, and projected at 2.6 percent in 2026, reflecting the deepening impact of aid reductions, climate, and global price shocks on an economy with limited productive capacity. Private consumption, underpinned by remittance inflows, remained the principal engine of domestic demand during the first quarter of 2026. However, the quarter was dominated by an intensifying drought and, from late February, an unanticipated surge in global energy prices that transmitted rapidly into the domestic economy.

Figure 4: Growth Rate 2020-2026

Source: SNBS, 2025 and IMF, 2026

As of March 2026, Somalia's macroeconomic performance has come under renewed pressure, as the resilience demonstrated in recent years has been challenged by the combined effects of a worsening drought, a significant external energy price shock, and the continued decline in foreign aid inflows. These overlapping shocks have intensified economic vulnerabilities, placing additional strain on growth prospects, fiscal conditions, and household welfare. Headline inflation is projected to increase to 5.9 percent in 2026 from 3.7 percent in 2025 due to disruptions in global energy markets, which more than doubled domestic fuel prices from about US\$0.60 to roughly US\$1.50 per liter, generating broad-based cost-push pressures across transport, food, and utilities. The simultaneous occurrence of a global energy shock, a worsening drought, and a structural decline in foreign aid created a reinforcing cycle of cost-push inflation, weakening rural incomes, and rising acute food insecurity. The combined effects are expected to widen the current account deficit, as fuel and food import bills surge, and to cause a marked deterioration in household welfare across both urban centers and rural agropastoral regions.

On the fiscal side, domestic revenue mobilization remained the principal source of strength, even as external grants weakened. Fiscal performance

is expected to show a financing gap of US\$65.1 million under the approved budget. Domestic revenues are projected to increase to US \$470.6 million by the end of 2026.

2.1 Livestock Exports

Livestock exports remained the backbone of Somalia's external sector during the first quarter of 2026, continuing to account for the dominant share of merchandise exports, primarily to Saudi Arabia, Oman, and the United Arab Emirates. Livestock export activity in the sector is highly seasonal, shaped by Hajj season and demand in Gulf markets.

During the first quarter of 2026, livestock exports increased by 39 percent compared to 2025Q4 and by 6 percent compared to the same period last year. Livestock exports contributed US \$257.76 million to the economy, accounting for 75 percent of total exports in 2026Q1. The composition of exports remained heavily weighted toward sheep and goats, followed by cattle and camels, consistent with established seasonal patterns. During the first quarter of 2026, the country exported 1,424,413 heads of livestock, comprising 1,293,931 sheep and goats, followed by 71,921 cattle and 58,561 camels.

Figure 5: Total Value of Livestock Export 2023Q1-2026Q1

Source: MoF, FSNAU and CBS valuations and adjustments, 2026

Table 2: Total Heads of Livestock Export (2025Q1 - 2026Q1)

Year	Quarter	Camel	Cattle	Sheep & Goats	Total Head

Source: MoF, FSNAU and CBS Valuations and adjustments, 2026

2.2 Domestic Inflation

Domestic inflation remained moderate through much of 2025, however, inflationary pressures re-intensified in the first quarter of 2026, driven by a combination of domestic supply-side disruptions and a sharp external energy price shock. Headline inflation is projected to rise to 5.9 percent in 2026, a significant upward shift from the relatively benign price environment of recent quarters. This acceleration reflects a reinforcing cycle of cost-push pressures stemming from three concurrent

shocks; a deepening drought that reduced domestic agricultural output and pushed food prices higher; a sharp surge in global energy prices that more than doubled domestic fuel costs and structural food price dynamics associated with continued high dependence on imported foodstuffs. On a quarterly basis, inflation increased from 5.1 percent in 2025Q4 to 6.3 percent in 2026Q1, as the impact of the failed Deyr season rainfall manifested in higher food prices.

Figure 6: Quarterly Average Trends in Domestic Inflation (%), 2024Q1-2026Q1

Source: SNBS, 2026

2.3 Exchange Rate Developments

The Somali shilling (SOS) remained broadly stable against the US dollar during the first quarter of 2026, continuing the pattern of gradual depreciation observed in recent years. The relative stability of the nominal exchange rate reflected the high degree of dollarization in the domestic economy, where a substantial share of transactions is conducted

in US dollars. During the first quarter of 2026, the Somali shilling depreciated by 1.2 percent, with an average exchange rate of SOS31,956 per US dollar. Over the quarter, the exchange rate fluctuated against the US dollar, reaching SOS32,039 in January, SOS31,243 in February, and SOS32,586 in March.

Trade Analysis

3.1 Trade Analysis 2026Q1

Somalia's merchandise trade has remained in persistent deficit, reflecting the structural imbalance between a narrow export base and strong import demand. Since 2018Q1, merchandise imports have followed a clear upward trajectory, increasing from approximately US\$683.56 million to US\$2,478.74 million in 2026Q1. The quarterly merchandise

trade deficit has widened correspondingly, from US\$589.73 million in 2018Q1 to US\$2,133.82 million in 2026Q1. In 2026Q1, total merchandise exports increased by 20 percent year-on-year to US\$345 million, while merchandise imports rose by 16 percent to US\$2,478.74 million. The merchandise trade deficit accordingly widened from US\$1,843.80 million in 2025Q1 to US\$2,133.82 million in 2026Q1. The export-to-import coverage ratio improved marginally from 13 percent to 14 percent, but export receipts continued to finance only a limited share of merchandise imports, underscoring the structural fragility of Somalia's external position.

Figure 8: Quarterly Trade Trends: Exports, Imports, and Trade Balance (2021Q1-2026Q1)

Source: MoF with CBS valuations and adjustments, 2026

3.2 Analysis of Imports in the First Quarter of 2026

Somalia's total imports amounted to US\$2,478.74 million in 2026Q1, representing a 12 percent decline from US\$2,814.23 million recorded in 2025Q4. Despite the quarterly decline, imports increased by 16 percent compared with US\$2,130.84 million in 2025Q1, indicating stronger import demand compared with the same period of the previous year.

Food imports remained the largest import category, accounting for 19 percent of total imports, with a value of US\$472.02 million. Food imports declined by 39 percent compared with 2025Q4 and by 8 percent compared with 2025Q1, reflecting lower food import demand compared to the previous quarter and the corresponding period last year.

Medical products ranked second, contributing 16 percent of total imports at US\$398.77 million. Imports of medical products decreased by 11 percent on a quarterly basis but increased by 31 percent compared with 2025Q1, reflecting continued demand for healthcare-related goods.

Construction materials accounted for 14 percent of total imports, valued at US\$356.88 million. Construction imports increased by 9 percent from the previous quarter and by 26 percent compared with 2025Q1, suggesting continued investment in construction activities.

Clothes and footwear imports amounted to US\$343.89 million, representing 14 percent of total imports. The category declined slightly by 0.9 percent compared with 2025Q4 but increased significantly by 34.0 percent compared with 2025Q1, indicating stronger consumer demand compared with the same quarter of the previous year.

Oil and gas imports totaled US\$265.72 million, accounting for 11 percent of total imports. This category recorded strong growth, increasing by 56 percent compared with 2025Q4 and by 41 percent compared with 2025Q1, driven by higher energy demand and increased import requirements.

Figure 9: Composition of Somalia's Merchandise Imports by Major Commodity Groups, 2026Q1 (Percent of Total Imports)

Source: MoF with CBS valuations and adjustments, 2026

Electronics and electrical machines reached US\$120.43 million, representing 5 percent of total imports. Imports in this category increased by 44 percent from the previous quarter and by 86 percent compared with 2025Q1, reflecting rising demand for technology and electrical equipment.

Cars and spare parts imports amounted to US\$117.32 million (5 percent of total imports), declining by 38 percent from 2025Q4 and by 30 percent compared with 2025Q1. Khat imports also declined, reaching US\$85.42 million, a decrease of 27 percent quarter-on-quarter and 11 percent year-on-year.

Table 4: Percentage Share of Imported Categories in the First Quarter of 2026 (In Millions of US Dollars)

Personal care products totaled US\$86.78 million, representing a 14 percent decline from 2025Q4 but a 33 percent increase compared with 2025Q1. Cosmetics imports recorded strong growth, increasing to US\$73.21 million, up by 64 percent compared with the previous quarter and 138.0 percent compared with 2025Q1, representing the highest annual growth among the listed categories.

Furniture and utensils imports declined to US\$39.60 million, falling by 42 percent quarter-on-quarter but increasing by 4 percent year-on-year.

Plant industries imports stood at US\$37.18 million, declining by 27 percent from the previous quarter but increasing by 21 percent compared with 2025Q1. Stationery imports decreased by 47 percent from 2025Q4 but increased by 9 percent compared with 2025Q1.

Beverages and tobacco recorded the weakest performance among the major categories, declining to US\$10.94 million. Imports in this category decreased by 31 percent compared with 2025Q4 and by 68 percent compared with 2025Q1.

3.3 Domestic Exports for the First Quarter of the Year, 2026

Merchandise exports increased to US\$344.91 million in 2026Q1, from US\$287.04 million in 2025Q1, representing a 20 percent year-on-year increase. Despite this improvement, the composition of exports remained highly concentrated, with livestock accounting for the majority of export receipts. Livestock exports

amounted to US\$257.76 million in 2026Q1, up from US\$244.30 million in the corresponding quarter of 2025, and represented 75 percent of total merchandise exports. The continued dominance of live animal exports underscores Somalia's limited diversification of its export base and its exposure to sector-specific and external shocks.

Table 6: Percentage Shares of the Leading Export Items in the First Quarter, 2026 (In Millions of US Dollars)

	2025Q1	2025Q2	2025Q3	2025Q4	2026Q1	% Share 2026Q1
Livestock	244.30	329.73	164.05	184.82	257.76	75
Animal Skins	11.72	8.03	23.80	19.41	32.68	9

Grand Total	287.04	390.84	299.09	283.57	344.91	

Source: MoF with CBS valuations and adjustments, 2026

Among the remaining export categories, animal skins increased substantially to US\$32.68 million from US\$11.72 million a year earlier, raising their share of total exports to 9 percent. Fishery exports also strengthened, increasing from US\$2 million to US\$15 million and accounting for 4 percent of total exports, although the sector's overall contribution remained modest relative to its estimated potential. In contrast, crops and

vegetable oil exports accounted for only US\$10 million, representing 3 percent of total exports, reflecting a significant decline from the elevated levels observed during the second half of 2025. Livestock products, primarily meat, remained broadly unchanged at US\$9 million, accounting for 3 percent of total export receipts, while forest products increased to US\$6 million, accounting for 2 percent of total export receipts.

4

Public Finance Development

Somalia's 2026 Federal Government budget reflects continued efforts to maintain fiscal stability while supporting priority government services amid a challenging economic environment. The approved budget projects a total revenue and grants of US\$1,298.7 million (8 percent of GDP), comprising US\$470.6 million (3 percent of GDP) in domestic revenue and US\$828.1 million (5 percent of GDP) in external grants. Domestic revenue is expected to be driven primarily by tax revenue (US\$336.6 million), while non-tax revenue is projected at US\$134.0 million. External grants remain the largest source of budget financing, with multilateral grants (US\$673.7 million) accounting for the majority of donor support, followed by bilateral grants (US\$154.4 million).

Total government expenditure is budgeted at US\$1,363.8 million, of which US\$1,153.8 million (85 percent) is allocated to recurrent expenditure and US\$210.0 million (15 percent) to capital expenditure. Within recurrent spending, the largest allocations are for the use of goods and services (US\$427.2 million) and compensation of employees (US\$378.5 million), followed by grants (US\$225.4 million). Smaller allocations are budgeted for social benefits (US\$35.0 million), subsidies (US\$8.0 million), and interest and other charges (US\$7.0 million).

Overall, the 2026 budget projects a financing gap of US\$65.1 million, highlighting the continued need for fiscal discipline, enhanced domestic revenue mobilization, and sustained donor support to finance government operations and development priorities.

4.1 FGS Revenue and Grants

During 2026Q1, the Federal Government of Somalia collected US\$153.9 million in total revenue and grants. Of this amount, domestic revenue contributed US\$100.6 million, accounting for approximately 65 percent of total revenue, while external grants amounted to US\$53.3 million (35 percent). Domestic revenue comprised US\$70.8 million in tax revenue and US\$29.7 million in non-

tax revenue. All external grants received during the quarter were multilateral grants, while no bilateral grants were disbursed. The strong contribution of domestic revenue demonstrates continued progress in revenue mobilization, although external grant financing remains an important source of fiscal resources.

Figure 12: The Performance of Government Fiscal Receipts in the First Quarter of the Fiscal Year 2026

Source: MoF, 2026

4.2 FGS Expenditure Performance

Total government expenditure amounted to US\$170.9 million during 2026Q1, exceeding total revenue and grants and resulting in a financing gap of US\$17.0 million. Recurrent expenditure totaled US\$164.4 million, accounting for approximately 96 percent of total spending, while capital expenditure amounted to US\$6.5 million (4 percent). Within recurrent expenditure, compensation of employees was the largest expenditure item at US\$86.7

million, followed by the use of goods and services (US\$37.2 million) and grants (US\$27.2 million). Other expenses totaled US\$12.2 million, while interest and other charges amounted to US\$1.1 million. No expenditure was recorded under social benefits or subsidies during the quarter. Overall, government spending remained concentrated on recurrent operations, with relatively limited capital investment during the first quarter of 2026.

Figure 13: The Performance of Government Fiscal Spending in the First Quarter of 2026

Source: MoF, 2026

4.3 Comparison of Quarterly Fiscal Performance

Fiscal performance in 2026Q1 showed modest improvements in domestic revenue mobilization alongside lower government expenditure compared with the corresponding quarter of 2025. Total revenue and grants declined slightly by 3 percent to US\$153.9 million from US\$158.9 million in 2025Q1, primarily due to lower external grant disbursements. However, domestic revenue increased by 7 percent, rising from US\$93.8 million to US\$100.6 million. This improvement was supported by growth in both tax revenue, which increased by 4 percent to US\$70.8 million, and non-tax revenue, which rose by 16 percent to US\$29.7 million.

External grants declined by 18 percent, falling from US\$65.1 million in 2025Q1 to US\$53.3 million in 2026Q1. The decline was largely attributable to the absence of bilateral grant disbursements during the quarter, while multilateral grants remained broadly stable at US\$53.3 million compared with US\$54.8 million a year earlier.

On the expenditure side, total government spending declined by 8 percent, from US\$186.5 million in 2025Q1 to US\$170.9 million in 2026Q1. Recurrent expenditure decreased by 4 percent to US\$164.4 million, mainly reflecting lower spending on compensation of employees and the use of goods and services. Compensation of employees declined by 4 percent, while expenditure on goods and services fell by 12 percent. Conversely, grants increased by 8 percent to US\$27.2 million, and other expenses rose modestly by 4 percent.

Capital expenditure recorded the largest decline, falling by 58 percent from US\$15.6 million in 2025Q1 to US\$6.5 million in 2026Q1, indicating slower implementation of development and infrastructure projects during the quarter.

Overall, the fiscal deficit narrowed from US\$27.6 million in 2025Q1 to US\$17.0 million in 2026Q1, representing an improvement of approximately 38 percent. The smaller deficit reflects stronger domestic revenue collection and lower government expenditure, despite reduced external grant inflows.

4.4 Federal Member States

4.4.1 FMS Revenue and Grants

During the first quarter of 2026Q1, Jubaland recorded total revenue and grants of US\$13.08 million, the highest among the Federal Member States, including US\$9.17 million in domestic revenue and US\$3.91 million in external grants. Galmudug followed with total revenue and grants of US\$5.59 million, comprising US\$2.87 million in

domestic revenue and US\$2.72 million in external grants. Hirshabelle recorded total revenue and grants of US\$3.53 million, with US\$1.73 million generated from domestic revenue and US\$1.80 million received through external grants. Southwest reported total revenue and grants of US\$3.31 million, including US\$1.25 million in domestic revenue and US\$2.06 million in external grants.

Figure 16: Summary of Federal Member States Revenues and Grants 2026Q1

Source: MoF, 2026

4.4.2 FMS Expenditure

During the first quarter 2026Q1, Jubaland recorded US\$14.67 million in total expenditure, consisting of US\$14.48 million in recurrent expenditure and US\$0.19 million in capital expenditure, resulting in a financing gap of US\$1.59 million. Galmudug followed with total expenditure of US\$9.21 million, including US\$7.98 million in recurrent expenditure and US\$1.23 million in capital expenditure with a financing gap of US\$3.61 million. Southwest

recorded total expenditure of US\$4.11 million, comprising US\$3.50 million in recurrent expenditure and US\$0.60 million in capital expenditure, resulting in a financing gap of US\$0.80 million. Hirshabelle reported total expenditure of US\$3.64 million, with US\$3.63 million allocated to recurrent expenditure and US\$0.01 million to capital expenditure and a financing gap of US\$0.11 million.

Financial Sector Development

During the first quarter of 2026, the Central Bank of Somalia continued to make important progress in strengthening Somalia's institutional and regulatory framework. Ongoing reforms focused on enhancing financial sector regulation and supervision, promoting financial inclusion, and improving the Anti-Money Laundering and Counter Financing of Terrorism (AML/CFT) framework contributed to reinforcing confidence in the country's financial system. Preparations for the reintroduction of the Somali Shilling under a currency board arrangement also moved forward, underscoring the Banks' commitment to monetary stability and stronger macroeconomic management. These reforms remain part of Somalia's broader economic modernization agenda, supported by international partners including the International Monetary Fund and the World Bank.

During the same period, the Central Bank of Somalia achieved a major institutional milestone by obtaining the internationally recognized ISO/IEC 27001:2022 certification for its Information Security Management System (ISMS). The certification, issued by the Management Systems Certification Body, confirms that the Bank's information security framework, including its ICT infrastructure, applications, and critical information assets, complies with global best practices in information security management and risk control. This achievement reflects Banks's continued commitment to strengthening operational resilience, institutional governance, cybersecurity, accountability, and internal control systems.

Regulatory progress also extended to new segments of the financial sector. In January 2026, the Central Bank of Somalia granted operating licenses to four Takaful companies, marking an important step in the formal regulation of Somalia's insurance sector in line with Shariah principles and risk-based supervisory standards. This brought a previously unregulated segment of the financial system under formal oversight, strengthening consumer protection and widening the scope of CBS supervision. Further strengthening the financial regulatory framework, in March 2026 the National Payment System Law was enacted, providing a comprehensive legal basis for the regulation, oversight, and operation of payment systems and payment service providers in Somalia. CBS also announced its participation in the Pan-African Payment and Settlement System (PAPSS), an important step toward improving cross-border payment infrastructure, supporting intra-African trade, and integrating Somalia further into the continent's financial architecture.

As of 2026Q1, Somalia's financial sector comprised 15 licensed banks (including 14 domestic commercial banks and 1 foreign bank), 17 licensed money transfer businesses (remittances), 6 mobile money operators, 19 microfinance institutions, 7 Takaful (Islamic insurance) institutions, and 2 payment systems. In recent years, the Central Bank of Somalia has strengthened the legal and regulatory framework governing non-bank financial institutions, including Takaful companies and microfinance institutions, through new licensing, reporting, and supervisory regulations introduced in 2025.

Alongside this measure, CBS continued to advance key financial sector reforms aimed at strengthening financial stability and expanding financial inclusion. These initiatives include the enactment of the National Payment Systems Act, as well as preparations for the establishment of a national credit bureau and a central collateral registry to improve access to credit information and support the expansion of formal lending.

5.1 Commercial Banks

Somalia's commercial banking sector continued to expand and strengthen during the first quarter of 2026, reflecting ongoing progress in financial sector development and institutional reform. The banking sector has played an increasingly important role in supporting financial intermediation, facilitating trade, expanding digital payment services, and promoting financial inclusion across the country. The sector continued to benefit from reforms

aimed at strengthening banking supervision, compliance, risk management, and Anti-Money Laundering and Counter Financing of Terrorism (AML/CFT) frameworks. The integration of banks into the National Payment System (NPS) and the Somalia Instant Payment System (SIPS) has further improved interoperability, transaction efficiency, and digital financial services nationwide. Despite persistent economic and security challenges, Somalia's commercial banking industry has demonstrated resilience and remains central to the country's broader economic modernization and financial inclusion agenda. Banking sector indicators remained healthy, supported by strong capital and liquidity levels, while the non-performing loan (NPL) ratio stayed below 4 percent. However, total credit to the private sector remained 5 percent of GDP, highlighting the still-developing nature of the formal banking sector despite its continued progress and resilience.

Source: CBS, 2026

Total assets of commercial banks increased to US\$2,352 million in 2026Q1 from US\$2,299 million in 2025Q4 and US\$2,021 million in 2025Q1. On a quarterly basis, total assets grew by 2 percent, while on an annual basis they increased by 16 percent. The expansion in total assets reflects improved banking sector activity, supported by growth in financing and investment portfolios during the review period. The asset structure remained dominated by cash holdings, which accounted for 35 percent of total assets (US\$834

million) in 2026Q1. Financing assets represented the second largest component at 25 percent, followed by investment assets at 16 percent.

Financing assets rose to US\$591 million in 2026Q1, compared to US\$540 million in the previous quarter and US\$491 million in 2025Q1, representing quarterly growth of 9 percent and annual growth of 20 percent. The increase points to stronger credit provision and greater commercial bank support for private sector activity. Trade financing remained

the largest component of the financing portfolio at 38 percent, consistent with the sector's focus on commerce and trade-related credit. Real estate loans accounted for 26 percent of financing assets, while construction loans represented 10 percent.

Investment assets also increased, rising to US\$386 million from US\$359 million in the previous quarter and US\$335 million in 2025Q1. Quarterly growth stood at 7 percent, while annual growth reached 15 percent, indicating a gradual shift toward more diversified and longer-term asset holdings.

Figure 18: Consolidated Commercial Banks Data (Assets) (2024Q1-2026Q1)

Source: CBS, 2026

On the liabilities side, total liabilities increased to US\$2,030 million in 2026Q1, up from US\$1,976 million in the previous quarter and US\$1,710 million in 2025Q1, representing quarterly growth of 3 percent and annual growth of 19 percent. Customer deposits remained the main source of funding, accounting for 81 percent of total liabilities at around US\$1,650 million. Deposits were broadly stable year-on-year and slightly higher quarter-on-quarter, suggesting continued public confidence in the formal banking sector.

Microfinance loans declined sharply to US\$0.2 million from US\$6.8 million in the previous quarter, continuing a downward trend that likely reflects the transition of microfinance activity toward the newly licensed and separately regulated microfinance institutions. Total shareholders' equity stood at US\$323 million, broadly unchanged from the previous quarter and 4 percent higher than the US\$311 million recorded in 2025Q1. The stable capital base, alongside balance sheet growth, indicates that the sector remains resilient and able to support a gradual expansion in financial intermediation.

5.1.1 Capital Adequacy and Liquidity Conditions

The banking sector maintained sound prudential conditions in the first quarter of 2026, with capital adequacy, core capital, and liquidity ratios all remaining comfortably above their regulatory minimums. The Capital Adequacy Ratio opened the quarter at 16 percent in January before easing slightly to 15 percent in February and March. It

remained well above the regulatory minimum of 12 percent throughout the period. This points to a gradual stabilization from the higher levels seen in early and mid-2025, when the ratio reached 21 percent, while still showing that banks held adequate capital buffers to absorb potential losses.

Figure 20: Commercial Banks' Capital Adequacy Performance

Source: CBS, 2026

The Core Capital Ratio stood at 15 percent in January before easing to 14 percent in February and March. Despite the modest decline, it remained above the regulatory minimum of 8 percent.

Figure 21: Core Capital Strength of the Banking Sector

Source: CBS, 2026

The Liquid Assets Ratio remained well above the regulatory minimum of 20 percent, recording 52 percent in January, 50 percent in February, and 51 percent in March. The ratio has remained broadly stable over an extended period, in line with the

high liquidity levels observed throughout 2024 and 2025. This position shows that banks retained sufficient capacity to meet short-term obligations and withstand potential liquidity pressures.

Figure 22: Liquidity Position of Commercial Banks

Source: CBS, 2026

5.2 Remittances

Total Inward remittance transfers amounted to US\$1,587.9 million in the first quarter of 2026, representing an 8 percent decline from US\$1,723.8 million recorded in the fourth quarter of 2025 and a 6 percent decrease compared with US\$1,685.7 million in the corresponding quarter of 2025. The quarterly decline partly reflects seasonal patterns, as the fourth quarter typically records higher inflows linked to year-end transfers and holiday-related remittances. Despite the moderation, inward transfers remained substantial and continued to support household consumption, private sector activity, and humanitarian operations across

the country. In terms of individual remittances were the largest component of total inflows, amounting to US\$875.0 million and accounting for 55 percent of total inflows. Business transfers totaled US\$489.7 million, representing about 31 percent, while NGO-related transfers reached US\$173.7 million, or 11 percent. Compared with 2025Q1, individual remittances increased from US\$801.6 million in 2025Q1, representing 9 percent while business transfers declined from US\$615.2 million (20 percent) and NGO transfers fell from US\$220.5 million (21 percent).

Source: CBS, 2026

Figure 23: Total Inward Transfers (2023Q1-2026Q1)

Source: CBS, 2026

Commercial banks processed US\$811.3 million in inward transfers during the first quarter of 2026, compared with US\$951.1 million in 2025Q4 and US\$900.1 million in 2025Q1, representing quarterly and annual declines of 15 percent and 10 percent respectively. Business transfers remained the main component of bank-facilitated inflows at US\$428.6 million, accounting for approximately 53 percent of total commercial bank inflows. Individual remittances processed through banks amounted to US\$233.4 million, representing 29 percent of bank inflows, while NGO-related transfers totaled US\$99.9 million.

Money transfer businesses processed US\$776.6 million in inward transfers during the quarter, broadly stable compared with US\$772.7 million in 2025Q4 but lower than US\$785.5 million in 2025Q1. Individual remittances remained the main component of MTB inflows at US\$641.6 million,

accounting for approximately 83 percent of total MTB transfers. This is consistent with the role of MTBs as the primary channel for household remittances. Business transfers through MTBs amounted to US\$61.1 million, representing 8 percent, while NGO-related transfers totaled US\$73.8 million, or 10 percent.

The distribution of inflows across channels shows a clear division of roles within Somalia's remittance system. Commercial banks remained the main channel for higher-value business and institutional transfers, while money transfer businesses continued to handle most personal remittance flows. The relative stability of MTB volumes, compared with the sharper decline in commercial bank inflows, suggests that household remittance flows were more resilient than institutional transfers during the quarter.

Figure 24: Remittance Inflows by Source and Channel in 2026Q1

Source: CBS, 2026

5.3 National Payment System

Payment system activity moderated in the first quarter of 2026 after the elevated levels recorded in the fourth quarter of 2025, which were partly driven by a sharp increase in December transaction values. The system operated through two main channels: the Real Time Gross Settlement system, which processes large-value interbank payments, and the Automated Clearing House, which facilitates retail and lower-value transactions.

During the quarter, the national payment system processed 337,788 transactions with a combined value of approximately US\$592.9 million. Compared with the previous quarter, transaction volume declined by 14 percent from 392,103 transactions, while transaction value fell by 26 percent from US\$798 million. On a year-on-year basis, transaction volumes were broadly stable compared with 339,504 transactions in 2025Q1, while total transaction value increased by 23 percent from US\$484.3 million, indicating a higher average value of payments processed through the system.

RTGS processed 10,558 transactions during the quarter with a combined value of approximately US\$467.8 million. Although RTGS accounted for less than 4 percent of total transaction volume, it represented around 79 percent of total transaction value, consistent with its role in settling large-value interbank obligations. On a year-on-year basis, RTGS transaction value increased by 31 percent from US\$357.9 million in 2025Q1, pointing to stronger high-value payment activity.

The Automated Clearing House accounted for most payment activity by volume, processing 327,230 transactions with a combined value of US\$125.2 million during the quarter. ACH transactions represented approximately 97 percent of total system volume, broadly in line with previous quarters. On a year-on-year basis, ACH transaction value declined slightly by 1 percent from US\$126.4 million in 2025Q1, while volumes declined modestly from 330,251 transactions.
